## Question No. 1

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription.

The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

The network contains the computers configured as shown in the following table.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

Privileged endpoint: 192.168.100.100

Hardware lifecycle host: 192.168.101.101

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

SQL Server

App Service

End of repeated scenario.

You need to ensure that the foreign principals for contoso.com can access Azure Stack services.

Which URL should the foreign principals use to sign in to Azure Stack?

- **A.** <https://portal.fabrikam.com>
- **B.** <https://ads.fabrikam.com/contoso.com>
- **C.** <https://portal.fabrikam.com/contoso.com>
- **D.** <https://adminportal.fabrikam.com/contoso.com>

**Answer:** C

### **Question No. 2**

You have an Azure Stack integrated system that uses the external domain name of west.fabrikam.com.

You plan to create an Azure Marketplace package.

Which API endpoint must you use to publish the package?

- **A.** [management.west.fabrikam.com](https://management.west.fabrikam.com)
- **B.** <https://graph.windows.net/>
- **C.** <https://graph.west.fabrikam.com/>
- **D.** [mydomain.onmicrosoft.com](https://mydomain.onmicrosoft.com)

**Answer:** A

### **Question No. 3**

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription.

The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

The network contains the computers configured as shown in the following table.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

Privileged endpoint: 192.168.100.100

Hardware lifecycle host: 192.168.101.101

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

SQL Server

App Service

End of repeated scenario.

You need to ensure that all the services hosted in Azure Stack can resolve the names configured in contoso.com.

Which cmdlet should you run?

- A. Add-DnsServerConditionalForwarderZone
- B. New-AzureRmDnsZone
- C. Register-CustomDnsServer
- D. Set-AzureRmDnsRecordSet

**Answer:** C

#### **Question No. 4**

Note: This question is part of a series of questions that use the same scenario. For your convenience,

the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription.

The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

The network contains the computers configured as shown in the following table.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

Privileged endpoint: 192.168.100.100

Hardware lifecycle host: 192.168.101.101

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

SQL Server

App Service

End of repeated scenario.

You need to install the Azure Stack Development Kit on Server1.

You download and extract all the required development kit components to Server1.

What should you do first?

- **A.** Install the Azure PowerShell module.
- **B.** Modify the BIOS on Server1.
- **C.** Run the Asdk-Installer.ps1 script
- **D.** Run the RegisterWithAzure.ps1 script.

**Answer:** C

### **Question No. 5**

You deploy an Azure Stack integrated system that uses an external domain name of west.fabrikam.com

Currently, tenant users access the system internally.

You need to create a SSL certificate for the publication of externally accessible endpoints. The solution must ensure that tenant users can upload VHD files to Azure Stack remotely.

Which two names should you include in the certificate? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- **A.** adminmanagement.west.fabrikam.com
- **B.** \*.west.fabrikam.com
- **C.** \*.blob.west.fabrikam.com
- **D.** adminportal.west.fabrikam.com
- **E.** \*.trafficmanager.west.fabrikam.com

**Answer:** B, C
