Question No. 1

You have an Azure subscription named Subscription1 that is used by several departments at your company. Subscription1 contains the resources in the following table.

Name	Type
Storage1	Storage account
RG1	Resource group
Container1	Blob container
Share1	File share

Another administrator deploys a virtual machine named VM1 and an Azure Storage account named Storage2 by using a single Azure Resource Manager template.

You need to view the template used for the deployment.

From which blade can you view the template that was used for the deployment?

- **A.** Container1
- **B.** VM1
- **C.** Storage2
- **D.** RG1

Answer: D

Question No. 2

A company plans to use third-party application software to perform complex data analysis processes. The software will use up to 500 identical virtual machines (VMs) based on an Azure Marketplace VM image.

You need to design the infrastructure for the third-party application server. The solution must meet the following requirements:

The number of VMs that are running at any given point in time must change when the user workload changes.

When a new version of the application is available in Azure Marketplace it must be deployed without causing application downtime.

Use VM scale sets.

Minimize the need for ongoing maintenance.

Which two technologies should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- **A.** single storage account
- **B.** autoscale
- **C.** single placement group
- **D.** managed disks Introduction to Azure managed disks

Answer: B, D

Question No. 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an app named App1 that uses data from two on-premises Microsoft SQL Server databases named DB1 and DB2.

You plan to move DB1 and DB2 to Azure.

You need to implement Azure services to host DB1 and DB2. The solution must support server-side transactions across DB1 and DB2.

Solution: You deploy DB1 and DB2 as Azure SQL databases on the same Azure SQL Database server.

Does this meet the goal?

- **A.** Yes
- **B.** No

Answer: B

Question No. 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an app named App1 that uses data from two on-premises Microsoft SQL Server databases named DB1 and DB2.

You plan to move DB1 and DB2 to Azure.

You need to implement Azure services to host DB1 and DB2. The solution must support erver-side transactions across DB1 and DB2.

Solution: You deploy DB1 and DB2 as Azure SQL databases each on a different Azure SQL Database server.

Does this meet the goal?

- **A.** Yes
- **B.** No

Answer: B

Question No. 5

You have an Azure Cosmos DB account named Account1. Account1 includes a database named DB1 that contains a container named Container1. The partition key for Container1 is set to /city.

You plan to change the partition key for Container1.

What should you do first?

- **A.** Delete Container1.
- **B.** Create a new Azure Cosmos DB account.
- **C.** Implement the Azure Cosmos DB.NET.SDK.
- **D.** Regenerate the keys for Account1.

Answer: B
